

Production

This section describes Casio's environmental protection initiatives in the area of general production.

Winter Eco-style challenge

On August 7, 2014, Yamagata Casio was recognized as an outstanding business establishment for its efforts in the Winter Eco-Style Challenge campaign coordinated by Yamagata Prefecture.

This annual activity, which began in fiscal 2009, is promoted to raise energy-saving awareness in the homes and businesses of the prefecture. In 2014, 862 establishments in Yamagata submitted details of their energy-saving activities carried out between November 1, 2013 and March 31, 2014. Just five were recognized as particularly outstanding business sites.

Yamagata Casio reduced the amount of compressed air it uses to drive machine tools and automated machines as well as to blow dust off components, while also constructing a power monitoring system. The company was recognized for these and other efforts, resulting in the outstanding business establishment award. Yamagata Casio will continue to actively promote energy saving initiatives in the future.
